

SQL Basics

Assignment Questions

Advanced Joins and GROUP BY:

1

Display the top 5 rented movies along with the number of times they've been rented. Hint: JOIN film, inventory, and rental tables, then use COUNT () and GROUP BY, and limit the results

Input

```
1 • SELECT f.title, COUNT(r.rental_id) AS times_rented
2 FROM film f
3 JOIN inventory i ON f.film_id = i.film_id
4 JOIN rental r ON i.inventory_id = r.inventory_id
5 GROUP BY f.title
6 ORDER BY times_rented DESC
7 LIMIT 5;
```

Result Grid

Filter Rows:

	title	times_rented
▶	BUCKET BROTHERHOOD	34
	ROCKETEER MOTHER	33
	FORWARD TEMPLE	32
	GRIT CLOCKWORK	32
	JUGGLER HARDLY	32

Output

Determine the customers who have rented movies from both stores (store ID 1 and store ID 2). Hint: Use JOINS with rental, inventory, and customer tables and consider COUNT() and GROUP BY.

Input

```
9 • SELECT r.customer_id
0 FROM rental r
1 JOIN inventory i ON r.inventory_id = i.inventory_id
2 GROUP BY r.customer_id
3 HAVING COUNT(DISTINCT i.store_id) = 2;
4
```

Output

Result Grid	
	customer_id
▶	1
	2
	3
	4
	5
	6
	7
	8
	9
	10
